

PRODUCT INFORMATION

Reference : FD-050-094

Technologies : Mifare Plus, Mifare Classic, Desfire, BLE

DESCRIPTION

Thanks to the modularity of the iPassan system, Dahua (especially for Australia) and Innova license plate recognition cameras can be integrated into access control.

The cameras and the central unit talk in IP. When the license plate is read, the cameras transmit the license plate in full to the access control system. Also, the events recorded in iPassan are able to show the clear plates of all cars, whether they are allowed to enter or not.

Four cameras dedicated to license plate reading can be integrated on a single control unit if it has the activation card FD-050-094. In this mode, the plate is read instantly. The control unit depends on the camera as it transmits the information of a recognised plate to the control unit. This is how the control centre allows the car to enter or not.
