

PRODUCT INFORMATION

Reference : FD-050-100

Technologies : Mifare Plus, Mifare Classic, Desfire, BLE

DESCRIPTION

The Onportal access control software has been designed specifically for hotel rooms. If the hotel belongs to a larger building, it is strongly recommended to integrate Onportal with iPassan.

The common areas of the building: parking, hall, assets and lifts are managed by iPassan.

Onportal allows you to control the private portion of the hotel. In addition, when the hotel operator gives a key to the guest, it provides access to the common areas.

The integration is done automatically from Onportal to iPassan Manager. Users then get a default door and floor access profile as soon as users and keys are imported into the database.

For this, an activation card is required at each site.
